

- Job Superintendent

I need all the floors in by next week!

The **construction process and scheduling** has never been easy to manage, especially with all the new innovations, high tech and complex systems going into each of these aesthetically beautiful and efficient commercial buildings. Adding a few days or weeks to each trade to complete their work without interference from other trades probably will **never happen**.

**Texas Granite** solid vinyl tile may be part of the **flooring solution** from the day it's installed and throughout the entire flooring life-cycle.

In many cases, Texas Granite is **installed early** in the construction process with **little or no floor protection**.

After the initial scrubbing and burnishing, plus routine cleaning and maintenance, Texas Granite will be around for decades to come and prove itself to be the **lowest total cost solution**.

18 year old Texas Granite in a busy hospital receiving corridor (left), renovated *only* to update color scheme!

Texas Granite is not only the most durable "Best in Class" solid vinyl tile, but it's also available in a variety of classic and contemporary colors specified in every commercial market segment.

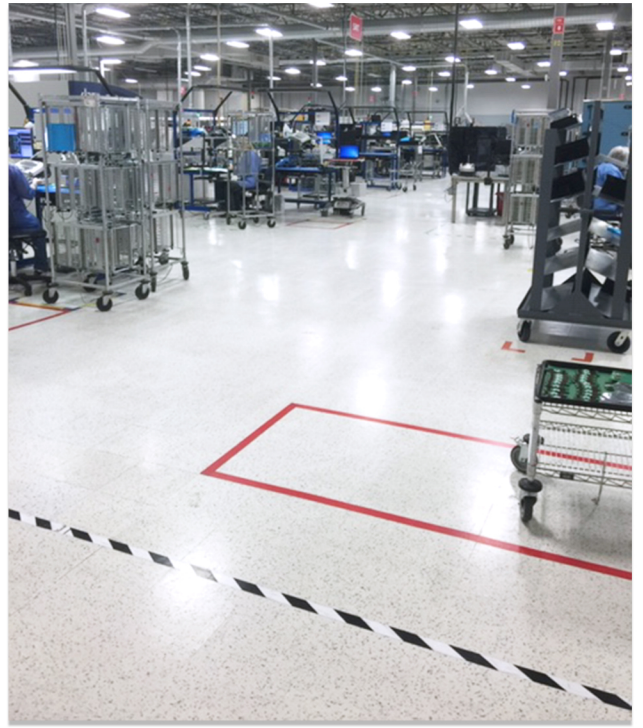

Texas Granite has very little filler and high vinyl content so it may be flashed coved and heat welded for operating rooms.

At 2500psi, it's naturally betadine resistant and outperforms other resilient floors under patient beds

Available in **Conductive**  
**and Dissipative**

150,000sf OEM manufacturer

**Yorkshire**  
Sales & Marketing

Let **Texas Granite** be part of your commercial flooring project - contact us and let us show you how it may be the **lowest total cost** solution for you!
